

Degree project in Synthetic Biology

[Visolis, Inc.](#), is an industrial biotechnology company located in Berkeley/San Francisco, California. Visolis is developing the next generation of bio-based processes that can convert renewable feedstocks into high performance polymers with a carbon negative footprint. We are seeking a motivated student for a master's thesis project in genetic engineering for production of bio-products. As part of the project, you'll gain hands on experience with engineering industrial microbes using the latest molecular biology tools. You'll gain insight into pathways and techniques to commercial products from environmentally sustainable biological sources.

For more information please contact Dr. Brian Lee at blee@visolisbio.com.
