

## **STAFF at SciLifeLab Science Summit, May 3, UKK, Uppsala**

### *Imaging the Complexity of Life*

This year we are focusing broadly on bioimaging, including super-resolution microscopy as well as cryo-electron microscopy and how these technologies are used for example to study neurobiology on a molecular level, plant differentiation processes or bacterial biofilm formation. International and national speakers are lined up to discuss the current state and future perspectives of bioimaging technologies and how they are used in research. Please visit: <https://www.scilifelab.se/science-summit-2017/> for more information.

The conference is held at Uppsala Konsert & Kongress (UKK) at Vaksala Torg, Uppsala. We need help from 8 students from 07:00 until 17:00. If you can help us part of the day, please let us know your availability. We will offer you 800 SEK (full day), fika/lunch/fika and an opportunity to take part in some of the talk held during the day.

Program: <https://www.scilifelab.se/science-summit-2017/program/>

We need some assistance at the registration desk, to host and make sure people know where to go and to run with microphones to the audience during questions to the speaker.

***Can you be of assistance?*** Please send an e-mail to: [erika.erkstam@scilifelab.uu.se](mailto:erika.erkstam@scilifelab.uu.se) ***as soon as possible.***
