UNIVERSITET

Research student in Immunology

I am looking for a highly motivated student who would like to do a **diploma project/master thesis project** in Immunology. You will work in a project that involves a lot of mouse handling. Experience from animal work or a passed animal course (FELASA certificate) is qualifying. You should have passed an **immunology course** and need to have an **ambition to do a PhD**. We are working with mouse models of e.g. allergic asthma and respiratory virus infections. The project will be related to the role of mast cells and their progenitors in the lung utilizing flow cytometry and microscopy techniques.

If you are interested, please contact me as soon as possible!
