Sobi offers the opportunity to work at an international pharmaceutical company focused on specialty pharmaceuticals on fulfilling the high medical needs of rare disease patients and providing treatment and services to them. Our employees have their background in various fields of research, industry and the academic sphere.

Masters thesis project in the Bioassays section

The bioassays section is a part of the biopharmaceutical R&D department at Sobi. We work with characterization and analysis of proteins for drug development and use biochemical, immunochemical and cell biological methods to measure biological activity, potency and process-related impurities like host cell proteins and DNA. The section also handles documentation for regulatory authorities and provides expertise in automation and biostatistics.
