

MSc thesis on novel porous bioceramics for bone regeneration

Uppsala University in collaboration with KTH (Stockholm) are looking for a MSc thesis student to help us to optimize new bioceramics for bone regeneration. These materials have a similar chemical composition than bone and interconnected macroporosity, what makes them very appealing for bone regeneration. The project may involve material optimization, characterization as well as cell studies.

The project is targeted to start in September 2018. Would you like to know more about the project?
