

Master's degree project in plant genetic engineering

Are you interested in plant biology and/or genetic engineering? In our research group, we are investigating the molecular machinery of plant autophagy. We are looking for a highly motivated student who is interested in joining us to optimize the CRISPR-Cas9 system for knock-in modification of plant genes.

Department: Molecular Sciences, Swedish University of Agricultural Sciences (SLU)

Place: BioCenter, Uppsala

Start: Fall 2018 (possibly spring 2019)

Application: via e-mail, see advertisement webpage
