Title (English) The use of bioinformatics within academia and large pharmaceutical companies in Sweden		
Title (Swedish)		
Abstract <p>An investigation of the use of bioinformatics within academia and pharmaceutical companies by Bosson & Riml (2002) displays not only the usage, but also determines the maturity of bioinformatics as a technology and presents critical factors needed for further development. This report is part of that study and focuses on the use within large pharmaceutical companies and a university department. The results show differences in the usage and knowledge level between company and academic researchers.</p>
