Title (English) <b>The use of bioinformatics within academia and small pharmaceutical companies in Sweden</b>		
Title (Swedish)		
Abstract In recent years, bioinformatics has come to play an important role in basic and pharmaceutical research. An investigation of the use of bioinformatics within academia and pharmaceutical companies by Bosson & Riml (2002) displays not only the usage, but also determines the maturity of bioinformatics as a technology and presents critical factors needed for further development. This report is a part of that study and focuses on the use of bioinformatics within one academic department and two small pharmaceutical companies. The main results were that there exist differences in the usage and type of tools primarily used.
